GOALS

I would like to be part of a stimulating team pursuing physics related goals, and, hopefully, bring my own contribution. I am dedicated and a fast-learner. If given a task, I can work in an autonomous manner as well as in a team. The two things that captivate me the most are: the solving of elegant problems and the execution of creative (possibly artistic) tasks.

EXPERIENCE

McGill Physics: Undergraduate Summer Intern **Summer 2022**
Internship as research assistant at McGill University within Paul François' theoretical biophysics research group. Studied the topology of the "Arnold Tongue Skeleton" of a set of nonlinear mappings. Also worked on creating a model for an entrained embryonic somite segmentation clock.

McGill Physics: Undergraduate Summer Intern **Summer 2021**
Internship as research assistant at McGill University within Paul François' theoretical biophysics research group. Worked on numerical computations for non-linear oscillators and 2D bifurcation diagrams (mainly Arnold Tongues) for variations of the radial isochron clock. This was applied to the modelling of the somite segmentation clock.

Phytronix Technologies: Research Assistant **Summer 2020**
Internship as research assistant at Phytronix technologies. Worked on the data analysis of a FAIMS system for the doctoral thesis of Johnathan Rochon (Université Laval, QC, Canada). Assisted the R&D department in the development of an automated pipetting robot. Used mass spectrometer to carry out a variety of tests. This involved a lot of Python programming for both the data analysis and the robotic manipulations.

John Abbott College: Physics Tutor **2018 - 2019**

Kruger Packaging: Student Worker **Summer 2019**

Norsk Hydro: Student Worker **Summer 2018**

École de ski Mont-Blanc: Ski Instructor **Winter 2016**
